BIM-FM Workflow Proposal

BIM-FM Workflow Proposal

BIM-FM Functionalities

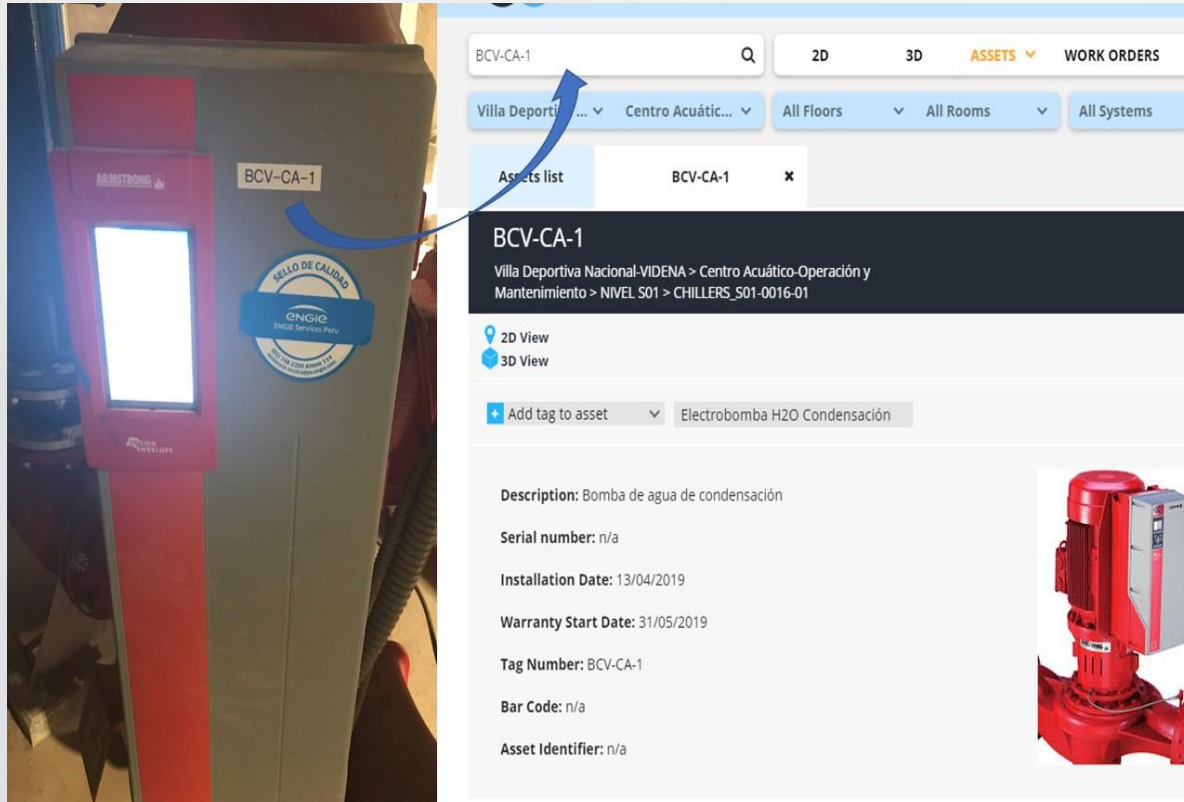

IGLC 28

BERKELEY, CA 6-12 JULY 2020

28th ANNUAL CONFERENCE OF THE
INTERNATIONAL GROUP FOR LEAN CONSTRUCTION

- Effectively Location Building Components

- Visual Management

Research Findings

	Traditional Maintenance flow	BIM-FM workflow
Information Storage	Stored in <u>files boxes</u>	Stored in the cloud
Information Presenting	<u>Paper-based</u> <u>2D- Drawings</u>	3D Model COBie Standard
Information Recording	<u>Paper reports</u>	Task tracking into BIM-FM System
Information Searching	<u>Searching the information on paper reports</u>	Searching by <u>tag component</u> into BIM-FM System <u>Navigation into BIM Model using filter tool</u> <u>Linking to external related i</u>

Research Findings

Activity Description	Time(minutes)	
	Traditional	BIM-FM proposal
E-Mail reception	5	5
Instant messengers	0	0
Understanding the Event	10	5
Searching of Information	10	5
Task performance	T	T
Recording and data uploading	20	10
Total	45+T	25+T
Time saving per incident	<u>$\Delta = 20$ minutes (1/3 hr)</u>	

Limitations and Barriers

- **Lack of BIM Requirements to Operation and Maintenance phase**
- **Need for qualified staff in BIM tools**
- **Lack of proof positive return of investment**

Conclusions and future work

- The workflow proposal improves the efficiency and productivity of the workforce in Facility Management tasks because they have access to an integrated information platform.
- The interaction between BIM Functionalities and Lean principles is relevant to support the proposal because the approach promotes collaboration in the whole life cycle of building exchanging complete and appropriate information along with stakeholders.
- **Future work:** Study of other BIM functionalities such as real-time monitoring and Building Management System(BMS) is recommended for Facility Management practice.
